

stress-free  
**structural  
integrity**

—

EASL is an advanced engineering consultancy specialising in providing **cost-effective** solutions to structural integrity problems.

**Experts in design, analysis and assessment, our methodology and innovative approaches take the stress out of structural integrity. EASL focus on solutions, where we will take ownership of clients' problems and provide the most appropriate response to meet their needs.**

EASL has over 250 collective man years' experience in structural integrity; with our specialist team ranging from graduate engineers to industry leaders successfully partnering with clients in a wide array of engineering industries to provide our trusted expertise.

# Approach

We take ownership of the problem, and part of our philosophy is going the extra mile to ensure the issue is solved.

EASL do not just seek to complete work, we excel at solving problems and providing a sustainable, effective response to whatever challenges arise – we achieve this by:

## Understanding client needs

Each client's problems are as varied as they are, which is why our first step towards building any relationship with new or established clients is understanding their needs. Our experts will work with you to ascertain precise requirements and develop a comprehensive response.

### HOW WE ACHIEVE IT:

- Clear Specification
- Customer Driven Focus
- Understanding Context
- Engaging Stakeholders

## Own the problem

When EASL take on work, we don't just complete the job, we take ownership for the problem. Understanding and engaging with our client's culture, we work collaboratively to develop the specification, allowing us to provide a relevant work package for the most effective solution.

### HOW WE ACHIEVE THIS:

- Establishing Efficient Solutions
- Open and Honest Responses
- Working in Partnership
- Shared Goals

## Quality

Our philosophy starts by selecting the engineers with appropriate skills, attitude and experience. Using a risk based assessment, we then apply an appropriate quality grade allowing us to establish a specific program of work, breaking down the job into separate parts to ensure the best approach.

### HOW WE ACHIEVE IT:

- Graded Approach to QA
- Risk Based Assessment
- Relevant Engineer Selection

## Delivery

With a detailed specification agreed, suitably qualified and experienced persons (SQEPs) are identified. That is, we pick the right people for the job. Programme planning is then put in place to ensure the work is delivered on time and on budget, monitored and controlled via our work management system.

### HOW WE ACHIEVE IT:

- Flexible Approach
- Programme Planning
- Responsive to Change
- Work Management System

taking the  
**strain**

Our forward-thinking approach manages risk. We offer cost-effective and timely structural integrity solutions that maximise your up-time.

Our solutions-focused approach clearly identifies client's goals and context to ensure quality delivery. With our broad range of experience, EASL provides a service bespoke to each client's needs and resources.

# reducing stress

Here are just a few of the clients we're proud to have delivered our structural integrity expertise to.

From world recognised brands through to global industry leaders, EASL have made a reputation as a trusted company for providing expert engineering consultancy.

A close-up photograph of a person's hand pointing at a technical drawing on a table. The drawing is a complex circular diagram with various lines, circles, and text, likely a mechanical or engineering blueprint. The person is wearing a light blue shirt and a watch. The background is slightly blurred, showing other people and a green plant.

# relieving pressure

We can take the strain of your problems, relieving the pressure on your resources and allowing you to concentrate on your core business.

With our team of highly specialised engineers and scientists, EASL provides clients with expert advice in an efficient and cost-effective manner. Our expertise can provide insight and clarity through our solutions and services.
