

1. Brief introduction of company, no more than 300 words, Chinese English bilingual

Founded in 2009, Libertine has developed a technology solution for powertrain Original Equipment Manufacturers (“OEMs”), enabling efficient and clean power generation from renewable fuels. Libertine’s linear electrical machines, controls and tools together form a technology platform (‘intelliGENTM’) which Libertine provides to OEM customers for the development of clean, highly efficient and fuel-flexible Linear Generator products. Libertine provides engineering services and prototype hardware to support OEM customer evaluation of its technology, and incorporation of this technology into customer-led Linear Generator development programmes. The addressable market for Linear Generators is significant, including over 12 million heavy-duty and light duty commercial vehicles, and more than 1 million distributed power generator sets (or ‘gensets’) for energy storage, off-grid and waste-to-energy applications.

英国上市科技公司 Libertine (LSE AIM: LIB)开发制造了由高性能直线电机，功率电子和运动控制系统组成的平台技术，可以帮助 OEM 开发制造自由活塞直线发电机，能够同时实现比肩燃料电池的效率（燃料转化为电能），和比肩传统内燃机的耐久性和成本，并且兼容氢气，以及天然气和甲醇等低碳和可再生燃料，可以广泛应用于电驱车辆的增程器，分布式能源等市场，助力实现全球低碳化和无碳化的未来！

2. Picture of products, no more than 5. High resolution.

3. Company Logo. PNG or JPG.
