Welcome Message

Welcome to the vibrant world of the UK's Automotive Industry.

For decades, the UK's automotive industry has been central to the UK economy - sustaining high value, high skilled jobs across the country. Every job in the sector supports 2.2 jobs in adjacent industries, from chemicals and steel to finance and advertising. Beyond the economic impact, the industry provides essential mobility that keeps society and commerce moving.

Today, the UK automotive sector is undergoing a profound transformation, driven by the global shift toward electrification, digitalisation, and sustainability. At the heart of this evolution lies a resilient and innovative supply chain—one that continues to adapt, grow, and lead in the face of change.

The UK Government's recently launched the **Modern Industrial Strategy 2025** outlines a comprehensive 10-year plan to boost business investment and support future industries, with the **automotive sector** playing a central role in this transformation. From cutting-edge propulsion and energy systems to power electronics, AI, and self-driving technologies, the sector showcases the UK's leadership in Zero Emission Vehicles (ZEV) and Connected and Automated Mobility (CAM).

This **UK Automotive Supply Chain Catalogue**, reflects the dynamic landscape of the UK automotive supply chain. The Catalogue has been developed to serve as a comprehensive resource for industry stakeholders, policymakers, investors, and international partners. It highlights not only established players but also emerging innovators who are shaping the future of mobility. The Catalogue aims to foster collaboration, strengthen the UK's position as a global hub for automotive innovation and support the sector's transition to a net-zero future. Whether you are exploring new partnerships, sourcing sustainable solutions, or investing in future mobility, I hope this catalogue will guide and inspire your journey through the UK automotive landscape.

Q5D

Company Introduction

Q5D sells and leases machines including hardware, software and services to OEMs and tier-1 suppliers in automotive, aerospace and consumer electronics industries so that our customers can automate the addition of electrical function in their products.

Our product hardware is a robust 5-axis machine with wiring and termination end-effectors, glue and polymer end-effectors, and printed electronics end-effectors with complex 5-axis additive Computer Aided Manufacturing (CAM) software.

Wiring provides the functionality in a huge range of products ranging from aircraft and vehicles to consumer and industrial electrical equipment. These markets are at least $200 billion and growing at 6-7% per year. The growth is driven largely by the net-zero agenda, which requires the electrification of almost everything.

Wiring is typically made on a pin-board by semi-skilled workers in low-wage economies. It is then shipped to the OEM where it is installed into the product, also by hand.
The pain points of the process are
- Expensive and labour intensive
- Error prone
- Long and fragile supply chains

Q5D's machine can achieve full automation of adding wiring into products that reduces cost, increases quality and productivity and makes it possible to on-shore manufacturing, and improving resilience.

Q5D Technology uses robotic and additive techniques to add electrical conductors directly onto the surface of products. It does this by combining three distinct technologies into a single hardware and software package including embedded wiring, glue and polymer deposition and printed electronics. Complex 5-axis additive Computer Aided Manufacturing (CAM) software is used to take a computer design and create the tool paths needed to drive the robotic hardware. It also incorporates a digital twin that can model the deposition to ensure there are no clashes between the end-effectors and pieces being made.

公司介绍

Q5D 向汽车、航空航天和消费电子行业的 OEM 和一级供应商销售和租赁机器，包括硬件、软件和服务，以便我们的客户可以在其产品中自动添加电气功能。

我们的产品硬件是一款 5 轴自动化机器，配有接线和端接末端执行器、胶水和聚合物末端执行器以及带有复杂 5 轴增材计算机辅助制造（CAM）软件的印刷电子末端执行器。

布线为从飞机和车辆到消费类和工业电气设备等各种产品提供了功能。这些市场至少有 2000 亿美元，并且以每年 6–7% 的速度增长。市场增长主要是由净零议程推动的，这需要几乎所有产品的电气化。

布线通常由低工资经济体的半熟练工人在针板上制作。然后将其运送到 OEM，在那里它也是手工安装到产品中。
流程的痛点是
- 昂贵且劳动密集型
- 容易 出错
- 漫长而脆弱的供应链

Q5D 的机器可以实现在产品中添加布线的完全自动化，从而降低成本，提高质量和生产率，使陆上制造成为可能，并提高弹性。

Q5D 技术使用机器人和增材制造技术将电导体直接添加到产品表面。 它通过将三种不同的技术组合到一个硬件和软件包中来实现这一点，包括嵌入式布线、胶水和聚合物沉积以及印刷电子产品。复杂的 5 轴增材计算机辅助制造 （CAM） 软件用于进行计算机设计并创建驱动机器人硬件所需的刀具路径。它还包含一个数字孪生，可以对沉积进行建模，以确保末端执行器和正在制造的部件之间没有冲突。

DP World

DP WORLD
CHANGE WHAT'S POSSIBLE

Company Introduction

At DP World, we exist to make the world's trade flow better. In automotive, that means delivering precision, pace, and performance, giving manufacturers and brands the confidence to focus on what they do best: designing and building the vehicles that move the world forward.

Today, we support the manufacturing and movement of around 10% of all vehicles produced globally — and that number is growing. With a presence in more than 80 countries, we unite world-class ports, terminals, distribution centres and customs-free zones with local expertise. The result? A scale of logistics capability that's unparalleled, and end-to-end solutions that keep the automotive industry moving.

We connect every stage of the journey into one seamless flow. From inbound logistics — supplier collection, consolidation, sequencing, and just-in-time delivery — through freight forwarding and customs management, to finished vehicle distribution, aftermarket support and value-added services, we provide one integrated solution. This reduces complexity, shortens lead times and delivers cost savings, all while allowing our partners to concentrate on innovation and production.

But seamless connections are only part of the story. We're restless innovators, combining physical infrastructure with digital intelligence. Our order and inventory management systems integrate with customer platforms to provide real-time visibility and control. Power BI dashboards transform raw data into actionable insights for planning and forecasting. Our trade finance solutions and resilient multimodal transport networks de-risk operations, giving automotive partners continuity of supply, even in unpredictable times.

We already work with leading OEMs and next-generation EV programmes, co-creating solutions that scale with demand, adapt to new markets, and accelerate sustainability ambitions. By combining our reach and scale with local agility, we open new markets and trade routes, even in places others cannot. That's how we expand access and unlock opportunities for growth.

Automotive is not just one of our verticals, it's a core strength. With DP World as your end-to-end logistics partner, the road ahead isn't just faster and simpler: it's limitless.
